Skills and Jobs:

Project manager:
It would be essential that our project would have a Project Manager position. A Project Manager plays an important role in the overall planning, monitoring and execution of projects. This involves preparing and controlling all aspects of a project or a group of workers whilst managing time efficiently. Their responsibilities also include risk management and the mediation of any group conflict. This individual would require a large amount of experience in team work as leadership.

Professional web developer:
It is extremely important that we have a Professional Web developer position for this project in order to bring our website to life. Professional Web developers are responsible for designing and developing websites and other applications. It is essential that this individual has advanced knowledge in a variety of programming languages and technologies. Professional web developers are responsible for managing the functionality of the clients desired website, as well as implementing useful features and effective security measures.

Lead developer:
The lead developer is in charge of the web development team and is responsible for his workers adhering to the quality and standards agreed between the client and company. Lead developers provide guidance and mentoring towards their team and the development of the project, as well as preparing the early stages of a product's development. These individuals are also responsible for directing the web development employees with other areas such as design, coding, testing and security. This individual would require a large amount of experience in team work as leadership, as well as having advanced skills in a variety of programming languages and technologies.
